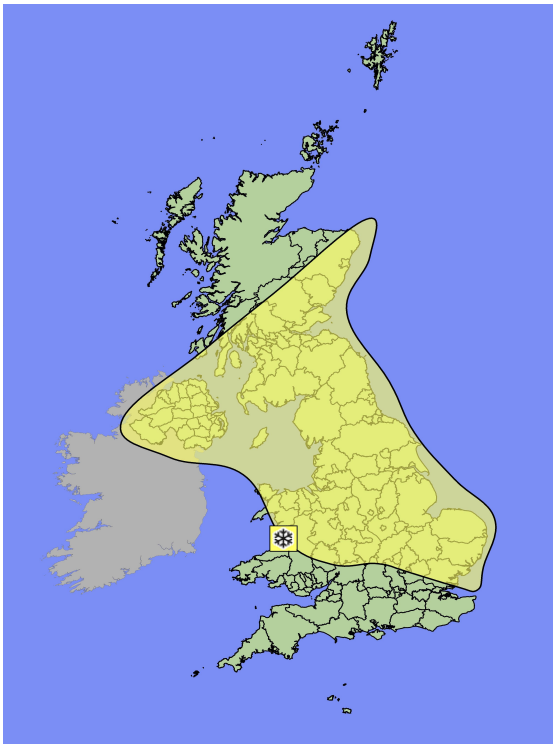
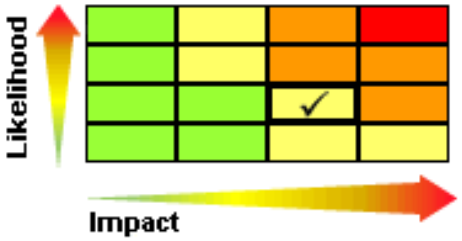
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone moving into Britain on Saturday will stall during Sunday. At the same time a feed of cold air is expected to then become drawn into the frontal zone causing the rain to turn increasingly to snow across in many regions.

There is still some uncertainty concerning the timing and extent of this snow, and it is possible that this alert will be upgraded to amber. Current indications suggest that the Midlands, north Wales and southern parts of Northern England could see the worst conditions.

The Met Office have issued a **Yellow Alert** of **Snow**

Valid from **06:00 on Sun, 10th Feb 2013** until **23:59 on Sun, 10th Feb 2013**

Early rain over western Britain is expected to turn to snow as it spreads eastwards across much of England, Wales and southern Scotland during the course of Sunday. Early rain over Northern Ireland is also likely to turn to snow, whilst other parts of Scotland are affected by wintry showers.

Accumulations at lower levels may exceed 10 cm over parts of the Midlands, Wales Northern England. Over ground above 300 metres accumulations in excess of 20 cm are possible. The public should be aware of possible disruption, particularly to travel.
